Signed by Mr V. S. Char

To The Revenue Commr & Director of Agri.

Sir

I am directed to observe that at present it has not been possible to ascertain at once the area under mulberry cultivation as in the case of wheat or cotton. In view of the importance of the mulberry crop, ~~as a necessary requisite for the development of sericulture~~ in the State, Govt. consider it necessary to have accurate

details about the growth of machinery in the State. I am accordingly to request to be informed whether a forecast of this important crop can be arranged to be sent to Govt. in the form prescribed for the submission of final forecast of the cotton crop with suitable modifications.

For favor of an early reply is requested along with ~~a~~ if any ~~form of the statement for adoption in this connection~~ draft may be proposed

THE SECRETARY TO THE GOVERNMENT OF
HIS HIGHNESS THE MAHARAJA OF MYSORE.
REVENUE DEPARTMENT.

Sen. 42-25-2

With reference to your letter No. I.C.4054-5/Seri.42-25-1 date 17th December 1925 regarding the introduction of an Annual forecast of mulberry crop in the State, I have the honor to state as follows:-

2. As regards the first point that at present it has not been possible to ascertain at once the area under mulberry cultivation as in the case of wheat or cotton, I have the honor to invite your reference t Government Order No.R.4395-4465/Stcs.20-21-3 dated 1st April 1922 (para directing that the area under mulberry and some other important crops should invariably be shown under the subhead to 34 Miscellaneous crops of Table IV of the Season and Crop Report and to add that it is being done with the result that sufficiently accurate details of Talukwar and Districtwar figures under mulberry are available in the said return. Wheat and cotton stand on a different footing in-as-much as they yield valuable products, which are readily marketable as soon as harvested an also these products enter very largely in the Export and Import Trade o British India and of the world. It is perhaps on these considerations that forecasts (five forecasts in the case of wheat and four in the case of cotton for a year) of these crops were prescribed at the instance of the Government of India.

3. Coming to the yield in respect of mulberry, it has to be noticed that the primary outturn of mulberry cultivation is largely a 'harvest of leaves' which has to be utilised in the locality or its immediate neighbourhood and in only one way, i.e., feeding silk worms. In Mysore where the multi-voltine species of silk worms is reared, the

mulberry leaves are harvested several times in a year at intervals of about a couple of months.

4. The circumstances and the absence of suitable standards of outturn will render it impracticable to make any accurate forecasts of the production of mulberry. It is also not clear that any estimate of the quantity of mulberry leaves produced will be of any particular benefit.

5. As already stated mulberry leaves are only used for silk worms and the output of silk depends on many factors in addition to the outturn of mulberry leaves. But if it is considered necessary by Government to have an Annual statement of mulberry cultivation in regard to extent alone, the first six columns and 14th column of the final cotton forecast giving particulars of the area may be adapted.

I have the honor to be,

Sir,

Your most obedient servant

C S Balasundaram

Revenue Commissioner.

G. D. SECTION

To

R. Ranga Rao, Esq., B.A.,B.L.,
Secretary to the Government of Mysore,
Medical and Agricultural Departments,
Bangalore.

SIR,

With reference to your letter No.I.C.4054-5/Seri.42-25 dated 17th December 1925, requesting whether a forecast of ıe mulberry crop can be arranged in the form prescribed for ıe submission of the final forecast for the cotton crop, I ıve the honour to forward herewith a draft form of forecast ong with copy of letter No.2515 dated 2nd February 1926 from ıe Superintendent of Sericulture in the matter.

It may be stated that it will not be easy to obtain a rrect forecast of the mulberry crop, as this depends largely the number of crops taken from a given area under different stems of cultivation.

The primary need is, however, to get a fairly corr return of the acreage, and the forecast of silk produc can then be made. The form now proposed will suit th purpose.

I have the honour to be
Sir,
Your most obedient servant

Offg. Director of Agriculture

SRL.

Letter No. 2515 dated 2nd February 1926 from the Superintendent [illegible] to the Offg. Director of Agriculture in Mysor

---

Subject and Reference:- Acreage under Mulberry.

In reply to your letter No. Roc. 1069-Hc. 271 of 25-26/enc. 3. dated 23rd January 1926 I have the honour to state:-

There can be no question about the importance of accurate statis tics of mulberry cultivation, but at present the only source of inform tion is the Season and Crop Report, based on figures collected by --- Revenue Agency. As this publication is generally issued long after the period to which the figures relate, the information contained in i even if accurate - comes too late as a guide for practical action, and cannot be used for preparing what can be properly called a forecast.

As the fluctuations of the area under mulberry furnish a sure indi cation of the economic position of the silk industry, I have constanti felt the absence of reliable and timely information on the subject; bu want of staff, relatively to the magnitude of the task, has precluded t possibility of undertaking its collection myself. This year, after personal consultation with the Revenue Commissioner (Mr. C. S. Balasundra Iyer) I have thought of a plan which will place me in possession of figures relating to the acreage under mulberry much in advance of the official publication, and enable me to verify an appreciable percentage. I pursuance of this plan, I have written to the Deputy Commissioners of the Districts where sericulture is practised to cause village-war --- figures showing the area under mulberry to be extracted from the Panar and sent to me; and I hope to have them all some time about March. I venture to think that verification by the Department specially concerned with the Industry, will add to the value of the statistics for all pur- poses. It would be a step in the right direction if Government could issue a direction that when the village accounts are checked by the -- Amildars preliminary to the Jamabandi, a statement of mulberry cultiva- tion may be prepared simultaneously, and sent to me. While this would entail no appreciable additional labour, it would enable me to check the figures, and prepare a statistical statement for the State such as could be submitted to Government.

This statement would give only the actual extent under mulberry, ıd be in no sense a forecast; but a forecast of the probable silk pro ıction could be prepared on the basis of the mulberry acreage and wo ; of commercial value. The forms now in use for cotton and cocoanut or mulberry of which there is practically but one variety in the stat ıd unsuitable also for a forecast of cocoon and silk production. ıve therefore proposed a single, simpler and more appropriate form.

"C o p y"

Offg. Director of Agriculture

Proceedings of the Govt. of His Highness
the Maharaja of Mysore.

.....

Order No. 27782-6 / Seri 42-20-4

Dated, B a n g a l o r e, 11th May 1926.

As the fluctuations of the area under mulberry afford an indication of the economic position of the Sericultural industry from time to time, Government consider it desirable that the Seri. Dept., should have correct and up to date information about the growth of mulberry and the details of area under the crop. The only return which now furnishes statistics of area under mulberry crop is the Season and Crop report, but as this report is usually issued - about six months after the expiry of the year to which it relates, the information contained in it is rather out of date.

2. Government are therefore pleased to direct that Amildars and Deputy Amildars of Taluks and Sub Taluks shall in future forward to the Superintendent of Sericulture immediately after Jamabandi, a statement as in the appended form (~~the first three columns~~) showing the acreage under mulberry in each village, as compared with the acreage under that crop during the previous year. The Superintendent of Sericulture will then consolidate the statement and compile a statement for the whole State for reference in his office, and ~~shall~~ submit a statement in the second form appended to this order for the information of the Government, through the Director of Agriculture by the end of April each year.

3. The Revenue Commissioner is requested to issue needful instructions to the Amildars and

and Deputy Amildars in this matter for their guidance.
